the complete practical guide to successfully modifying cylinder heads for maximum power economy and reliability applies to almost every car motorcycle not 2 stroke and to all road and track applications

here is a comprehensive breakdown of the features and specifications of all available gen iii iv small block chevrolet cylinder heads as well as supporting components

this book shows you how to choose the best cylinder head for your application it covers both gen i and gen ii small block chevy versions occasionally touching on the gen iii and gen iv production versions this book taps into some of the best small block chevy cylinder head resources this country has to offer with a combination of insight and best guesstimates because much of what we know about port design and airflow management falls under the category of art rather than science

porting heads is an art and science it takes a craftsman s touch to shape the surfaces of the head for the optimal flow characteristics and the best performance porting demands the right tools skills and application of knowledge few other engine builders have the same level of knowledge and skill porting engine heads as david vizard all the aspects of porting stock as well as aftermarket heads in aluminum and cast iron constructions are covered vizard goes into great depth and detail on porting aftermarket heads starting with the basic techniques up to more advanced techniques you are shown how to port iron and aluminum heads as well as benefits of hand and cnc porting you are also shown how to build a high quality flow bench at home so you can test your work and obtain professional results vizard shows how to optimize flow paths through the heads past the valves and into the combustion chamber the book covers blending the bowls a basic porting procedure and also covers pocket porting porting the intake runners and many advanced procedures these advanced procedures include unshrouding valves porting a shortside turn from the floor of the port down toward the valve seat and developing the ideal port area and angle all of these changes combine to produce optimal flow velocity through the engine for maximum power

this project focuses on re design and fabrication of new cylinder head concept

model for a 4 stroke motorcycle engine the idea of the new cylinder head model was also completed it s for the purpose of demonstrating the idea of this new concept it also focuses on re design the new upper piston for the new cylinder head the piston based design was from psm student the re design was done for simplifying the fabrication machining and casting process to achieve this project objective this upper piston pattern should be fabricated using casting and machining process but the dimension changes were done after the first casting work didn t produce the desired product this project flow must start from study design and lastly fabrication process before fabricate the upper piston a study was made for the design based on the original design by malcolm beare and study on modenar 110cc engine system it is because to study the specification need and maintain the original design diploma final year project will cover for the whole last semester before go to the industrial training to complete this project this is an individual task and must do by ourselves this is also one of opportunity to student to show or to apply their knowledge also skill in using manufacturing process and mechanical design software in complete this project time management and a good planning also important to make sure the entire plan are in their way lastly discipline needed to complete this project

practical methods for increasing the performance of auto engines completely illustrated and written for both amateurs and shop pros
